

Omni Group

Support health check — Client

support-priority · 2026-10-08 · response target 24h

Prepared for: Client
Deliverable: Priority support
Date: 08/10/2026

Problems this package addresses

Package support-priority × industry healthcare — 10 concrete problems (target 5–10):

1. Healthcare clients wait too long for support responses
2. Front-desk overload on intake and rescheduling
3. Referral leakage between clinics and specialists
4. Compliance fear blocking useful automation
5. Patient intake forms leak PHI into generic CRM fields
6. Appointment no-show rate without reminder automation
7. No SLA queue with 24h target
8. FAQ not structured
9. Support tickets untracked
10. No ticket categories in portal

These map to checkout OmniTrix claims and must appear in the delivered pack — not marketing-only copy.

Queue status

Client: Client. Industry: healthcare. Package: support-priority. Response target: 24 business hours. Kickoff ticket: 201dcf93-ba83-476d-8920-5764088f8c9b. Open tickets live in the portal Tasks inbox. This PDF is the snapshot for the period — replies still happen on the ticket, not inside the PDF.

What was checked

Portal support queue is the service. FAQ seed is the answer corpus until you add client-specific answers. Billing access for this retainer should still show as active. Notifications module should still be entitled. No LinkedIn, Google Ads, or Apollo channel is marked CONNECTED by this health check. Video avatar stays CONFIGURATION REQUIRED until HeyGen or D-ID keys exist.

Next 30 days

1. Reply to open kickoff and change-request tickets inside the response target.
2. Add one client-specific FAQ if the seed answers are too generic.
3. Confirm the welcome pack and this health-check PDF are both in Deliveries.
4. Dedicated tier only: Slack fires when the platform webhook is configured. That is a notify, not a private Slack channel on your workspace.

Honesty

Not included: uptime monitoring on servers you own, weekend emergency coverage, unlimited engineering hours, or an automated SLA breach clock. The retainer scheduler writes the next health-check PDF about 30 days after the previous one. Period label: 2026-10-08.
