Technical & Digital Readiness Audit

Client — Technology

Prepared for: Client
Deliverable: Technical audit
Date: 06/10/2026

Executive summary

Client operates in Technology (technology). This audit evaluates stack readiness, security posture, conversion funnel integrity, and operational automation maturity against Technology peer benchmarks.

Technology-specific audit lenses:

- Release safety
- On-call maturity
- CS feedback loop

Headline findings (deterministic baseline — refine with live discovery notes):

- Primary value thesis: End-to-end delivery for Technology: CRM, automations, lead gen, and AI support — no platform resale, only finished output.
- Recommended core modules: crm, client-hunter, outreach, automation, billing
- Top research lenses: Tehnologija SMB market; local lead generation; digital adoption pain points
- Domain tokens in scope: product roadmap, SLA uptime, on-call rotation, feature flag
- 90-day outcome target: portal live, CRM pipeline seeded, first automation closed-loop, measurable lead response SLA

Risk posture (preliminary) for Technology: Medium until auth, backup, and payment-confirm paths are evidence-checked. Priority risks:

- Roadmap without customer success feedback
- Feature flags left half-rolled
- On-call burnout without ownership

Current state assessment

Industry focus areas for Technology:

- Tehnologija SMB market — score current maturity (1–5) and evidence location
- local lead generation — score current maturity (1–5) and evidence location
- digital adoption pain points — score current maturity (1–5) and evidence location
- compliance and onboarding — score current maturity (1–5) and evidence location

Capability scorecard (fill during kickoff):

- Identity & access (SSO/MFA, admin least-privilege)
- CRM hygiene (stages, owners, SLA clocks)
- Outbound/inbound attribution
- Billing / fulfillment handoff reliability
- Content & SEO basics for acquisition pages
- Release safety — evidence note
- On-call maturity — evidence note

Quality gates used as acceptance bar:

- Research complete (TAM + competition in research_data)
- Artifacts generated (module, landing, workflow, outreach, quality pack)

- Dynamic pricing quote valid for verticalSlug
- CRM pipeline and lead source defined
- Outreach draft reviewed before send (domain warmup)
- Smoke test / owner sign-off before client delivery

Security & compliance

Checklist for Technology — mark each item Pass / Fail / N/A with evidence:

1. TLS everywhere (no mixed content); HSTS where applicable
2. Secrets not in client bundles; rotation cadence documented
3. Auth: password reset, session expiry, role separation for admin vs client
4. Backup: encrypted at rest, restore drill within last 90 days
5. Audit log for payment confirm and privilege changes
6. Rate limits / abuse controls on public forms and APIs
7. Dependency and image patch policy for production hosts
8. Security review gate for material releases
9. Customer data processing addendum when needed
10. On-call / incident severity matrix published

Milestone: complete this checklist before any production DNS cutover (Phase 1).

Recommended stack & integrations

For Client in Technology, prioritize:

- Modules: crm, client-hunter, outreach, automation, billing
- Primary offers: Technical audit (€2100); Custom integration (€5289); Full onboarding (€4492); Software starter kit (€20997)
- Keywords / positioning: tehnologija, SMB, local business, automation, technology
- Issue IDs correlate incidents, flags, and releases
- CS tickets can spawn backlog items with templates

Integration order (avoid big-bang):

1. Portal auth + notifications
2. CRM pipeline + lead source tags
3. Payment confirm !' fulfillment webhook
4. Outreach / follow-up only after CRM stages are stable

90-day roadmap

Phase 1 — Days 1–30 (foundations)

- Kickoff + access inventory
- Portal/auth smoke tests
- Security checklist baseline (Technology compliance items)
- Severity matrix live

Phase 2 — Days 31–60 (revenue path)

- Discover local leads: discover (client-hunter)
- Score leads: score (lead-scoring)
- CRM capture: create-contact (crm)
- Outreach sequence: sequence (outreach)

Phase 3 — Days 61–90 (scale & measure)

- Follow-up: run
- Billing: invoice

- KPI review (Technology): Uptime SLA; Release success rate; Time-to-mitigate incidents
- Acceptance: owner sign-off against quality gates

Milestones:

1. M1 Go-live checklist green
2. M2 First closed automation loop
3. M3 ROI dashboard reviewed with client
4. M4 Severity matrix live
5. M5 Flag hygiene policy
6. M6 CS!'backlog path tested

ROI estimate & acceptance checklist

Conservative model for Technology assumes 15–25% operational improvement and reduced admin hours from automation within 90 days. Track weekly KPIs:

- Uptime SLA
- Release success rate
- Time-to-mitigate incidents
- NRR / expansion

Acceptance checklist (purchase justification):

- & Executive summary names client + Technology
- & Security checklist completed with evidence notes
- & Industry compliance items covered: product roadmap, SLA uptime, on-call rotation
- & Stack recommendations map to activated modules
- & 90-day roadmap has dated phases + milestones
- & ROI metrics owners assigned
- & Outreach hooks validated: Turnkey delivery for Tehnologija — no platform resale | CRM + automations tailored to your niche
