Landing + copy — Delivery pack

Admin Support Studio — Admin Support

Prepared for: Client
Deliverable: Landing + copy
Date: 06/10/2026

What shipped

landing page for Admin Support Studio in Admin Support (admin_support).

Live URL (path): /sites/admin-support-studio-14636a61457c-mux7hr52

Open in browser: <https://omnigrouptech.com/sites/admin-support-studio-14636a61457c-mux7hr52>

Pages generated: 1

Value thesis: End-to-end delivery for Admin Support: CRM, automations, lead gen, and AI support — no platform resale, only finished output.

Domain tokens in copy scope: virtual assistant, inbox triage, calendar management, SOP checklist, task SLA

Research lenses: virtual assistant market; SMB admin outsourcing; workflow automation

Brand & messaging checklist

Confirm the live page reads as Admin Support Studio — not a platform placeholder.

- & Brand/title shows Admin Support Studio
- & Primary offer language fits Admin Support
- & CTA matches sales path (contact / book / buy)
- & Industry phrases present: virtual assistant, inbox triage, calendar management, SOP checklist
- & Pain points reflected: Founder stuck in inbox; Missed follow-ups; No documented handoff for assistants

Milestone M1: owner screenshots the hero + CTA for kickoff ticket evidence.

How to share with clients

Send <https://omnigrouptech.com/sites/admin-support-studio-14636a61457c-mux7hr52> as your hosted presence under omnigrouptech.com.

Custom domain DNS is not included — keep this URL or add a redirect / CNAME at your registrar when ready.

Share checklist:

1. Paste the absolute URL into email signature and social bios
2. Add to proposals as “live preview” before custom domain
3. Share with sales so demos use the same CTA as the site
4. Mention Admin Support positioning: Automate repetitive VA tasks | CRM + task queue for your team

Acceptance: one outbound message with the live URL sent by the client team.

SEO & social basics

Title/meta and Open Graph tags are set on the published page. Favicon is served from the site shell.

- Primary keywords to monitor: virtual assistant, admin support, data entry, executive assistant
- Verify link previews (Slack/WhatsApp/LinkedIn) after first share
- Keep NAP consistent if you also claim Google Business Profile
- Avoid inventing review counts or Admin Support certifications not yet earned

Day-7 checklist: & preview card OK & title unique & no Omni chrome in visible copy

Analytics snippet guide (you add the ID)

This package prepares placement guidance — it does not create a live analytics property for you.

Plausible:

Add `<script defer data-domain="YOUR_DOMAIN" src="https://plausible.io/js/script.js"></script>` via a future content refresh, or track outbound clicks to this URL in your existing analytics.

GA4:

Create a property, copy Measurement ID (G-XXXX), and paste into your marketing stack when ready. Until then, treat contact CTA clicks as the conversion event.

Admin Support KPIs to wire once analytics is live:

- Inbox first-response time
- Task completion SLA %
- Calendar conflict rate

Checklist: & property created & ID stored in password manager & goal/event named for primary CTA

Retargeting pixel placement guide

Meta/Google remarketing pixels require your ad account ID. Do not invent pixel IDs.

1. Create the pixel / tag in your ads account
2. Place it on the live page only after credentials are live
3. Map the primary CTA as the conversion event
4. Align creative with Admin Support pains: Founder stuck in inbox; Missed follow-ups

Honesty rule: ads channels remain NOT CONNECTED until you wire keys — the site CTA still works without pixels.

Milestone: pixel plan documented even if install is deferred.

Launch QA & acceptance

QA gate for Admin Support Studio (Admin Support) before paid traffic:

- & Mobile viewport: hero + CTA readable without horizontal scroll
- & Contact / checkout path returns success feedback
- & No System Admin / Omni Group chrome in visible title or body
- & Research complete (TAM + competition in research_data)
- & Artifacts generated (module, landing, workflow, outreach, quality pack)
- & Dynamic pricing quote valid for verticalSlug
- & CRM pipeline and lead source defined
- & PII access limited to assigned VA roles
- & Client credential vault policy (no shared passwords in chat)

Acceptance: owner signs kickoff ticket that the live URL is shareable.

30-day content & CRM follow-through

After launch, keep Admin Support momentum without inventing metrics:

- & Inbox triage live
- & Calendar ownership mapped
- & SOP pack signed

- & Review KPIs weekly: Inbox first-response time; Task completion SLA %; Calendar conflict rate
- & Watch risks: Inbox backlog without triage SLA; Calendar double-books across timezones
- & Log inbound leads in CRM with source = site CTA

Discovery prompts for the first optimization call:

1. Which inboxes and tools must the VA own day-one?
2. What is the escalation path for VIP clients?
3. Where do SOPs live today?

Vertical focus: virtual assistant market; SMB admin outsourcing; workflow automation.

Upsell path (only if requested): custom domain, content refresh retainer, audit, or CRM sync when inbound is live.

Next upgrades

- Custom domain DNS (client-owned registrar)
- Content refresh retainer for seasonal offers
- Deeper Admin Support audit if stack/security questions remain
- Integration package when third-party APIs must be wired
