Landing + copy — Delivery pack

Automotive Studio — Automotive

Prepared for: Client
Deliverable: Landing + copy
Date: 07/10/2026

What shipped

landing page for Automotive Studio in Automotive (automotive).

Live URL (path): /sites/automotive-studio-22c68efaa232-muxjau8r

Open in browser: <https://omnigrouptech.com/sites/automotive-studio-22c68efaa232-muxjau8r>

Pages generated: 1

Value thesis: End-to-end delivery for Automotive: CRM, automations, lead gen, and AI support — no platform resale, only finished output.

Domain tokens in copy scope: RO repair order, parts ETA, bay utilization, OEM recall, test drive

Research lenses: Automobili SMB market; local lead generation; digital adoption pain points; compliance and onboarding

Brand & messaging checklist

Confirm the live page reads as Automotive Studio — not a platform placeholder.

- & Brand/title shows Automotive Studio
- & Primary offer language fits Automotive
- & CTA matches sales path (contact / book / buy)
- & Industry phrases present: RO repair order, parts ETA, bay utilization, OEM recall
- & Pain points reflected: Cars sitting for parts; Advisor overload; Missed recalls

Milestone M1: owner screenshots the hero + CTA for kickoff ticket evidence.

How to share with clients

Send <https://omnigrouptech.com/sites/automotive-studio-22c68efaa232-muxjau8r> as your hosted presence under omnigrouptech.com.

Custom domain DNS is not included — keep this URL or add a redirect / CNAME at your registrar when ready.

Share checklist:

1. Paste the absolute URL into email signature and social bios
2. Add to proposals as “live preview” before custom domain
3. Share with sales so demos use the same CTA as the site
4. Mention Automotive positioning: Turnkey delivery for Automobili — no platform resale | CRM + automations tailored to your niche

Acceptance: one outbound message with the live URL sent by the client team.

SEO & social basics

Title/meta and Open Graph tags are set on the published page. Favicon is served from the site shell.

- Primary keywords to monitor: automobili, SMB, local business, automation, automotive
- Verify link previews (Slack/WhatsApp/LinkedIn) after first share
- Keep NAP consistent if you also claim Google Business Profile

- Avoid inventing review counts or Automotive certifications not yet earned

Day-7 checklist: & preview card OK & title unique & no Omni chrome in visible copy

Analytics snippet guide (you add the ID)

This package prepares placement guidance — it does not create a live analytics property for you.

Plausible:

Add `<script defer data-domain="YOUR_DOMAIN" src="https://plausible.io/js/script.js"></script>` via a future content refresh, or track outbound clicks to this URL in your existing analytics.

GA4:

Create a property, copy Measurement ID (G-XXXX), and paste into your marketing stack when ready. Until then, treat contact CTA clicks as the conversion event.

Automotive KPIs to wire once analytics is live:

- Bay utilization
- RO cycle time
- Parts ETA accuracy
- CSI / CSAT

Checklist: & property created & ID stored in password manager & goal/event named for primary CTA

Retargeting pixel placement guide

Meta/Google remarketing pixels require your ad account ID. Do not invent pixel IDs.

1. Create the pixel / tag in your ads account
2. Place it on the live page only after credentials are live
3. Map the primary CTA as the conversion event
4. Align creative with Automotive pains: Cars sitting for parts; Advisor overload

Honesty rule: ads channels remain NOT CONNECTED until you wire keys — the site CTA still works without pixels.

Milestone: pixel plan documented even if install is deferred.

Launch QA & acceptance

QA gate for Automotive Studio (Automotive) before paid traffic:

- & Mobile viewport: hero + CTA readable without horizontal scroll
- & Contact / checkout path returns success feedback
- & No System Admin / Omni Group chrome in visible title or body
- & Research complete (TAM + competition in research_data)
- & Artifacts generated (module, landing, workflow, outreach, quality pack)
- & Dynamic pricing quote valid for verticalSlug
- & CRM pipeline and lead source defined
- & OEM recall campaigns tracked to VIN
- & Customer authorization before extra repairs

Acceptance: owner signs kickoff ticket that the live URL is shareable.

30-day content & CRM follow-through

After launch, keep Automotive momentum without inventing metrics:

- & RO stages live
- & Parts ETA alerts
- & Recall flag tested
- & Review KPIs weekly: Bay utilization; RO cycle time; Parts ETA accuracy
- & Watch risks: Parts ETA slips stall bays; Unauthorized upsells damage trust
- & Log inbound leads in CRM with source = site CTA

Discovery prompts for the first optimization call:

1. What DMS / RO system is used?
2. How are parts ordered and tracked?
3. How are recalls handled?

Vertical focus: Automobili SMB market; local lead generation; digital adoption pain points.

Upsell path (only if requested): custom domain, content refresh retainer, audit, or CRM sync when inbound is live.

Next upgrades

- Custom domain DNS (client-owned registrar)
- Content refresh retainer for seasonal offers
- Deeper Automotive audit if stack/security questions remain
- Integration package when third-party APIs must be wired
