Landing + copy — Delivery pack

Healthcare Studio — Healthcare

Prepared for: Client
Deliverable: Landing + copy
Date: 07/10/2026

What shipped

landing page for Healthcare Studio in Healthcare (healthcare).

Live URL (path): /sites/healthcare-studio-230018d2c81e-muxuzkbbx

Open in browser: <https://omnigrouptech.com/sites/healthcare-studio-230018d2c81e-muxuzkbbx>

Pages generated: 1

Value thesis: End-to-end delivery for Healthcare: CRM, automations, lead gen, and AI support — no platform resale, only finished output.

Domain tokens in copy scope: HIPAA, PHI, patient intake, clinical scheduling, BAA, ehr

Research lenses: patient intake digitization; clinical scheduling no-show reduction; HIPAA/PHI handling maturity; referral leakage between clinics

Brand & messaging checklist

Confirm the live page reads as Healthcare Studio — not a platform placeholder.

- & Brand/title shows Healthcare Studio
- & Primary offer language fits Healthcare
- & CTA matches sales path (contact / book / buy)
- & Industry phrases present: HIPAA, PHI, patient intake, clinical scheduling
- & Pain points reflected: Front-desk overload on intake and rescheduling; Referral leakage between clinics and specialists; Compliance fear blocking useful automation

Milestone M1: owner screenshots the hero + CTA for kickoff ticket evidence.

How to share with clients

Send <https://omnigrouptech.com/sites/healthcare-studio-230018d2c81e-muxuzkbbx> as your hosted presence under omnigrouptech.com.

Custom domain DNS is not included — keep this URL or add a redirect / CNAME at your registrar when ready.

Share checklist:

1. Paste the absolute URL into email signature and social bios
2. Add to proposals as “live preview” before custom domain
3. Share with sales so demos use the same CTA as the site
4. Mention Healthcare positioning: PHI-safe intake + reminder automation | Referral follow-up without leaking clinical notes

Acceptance: one outbound message with the live URL sent by the client team.

SEO & social basics

Title/meta and Open Graph tags are set on the published page. Favicon is served from the site shell.

- Primary keywords to monitor: healthcare, patient intake, HIPAA, clinical scheduling, PHI
- Verify link previews (Slack/WhatsApp/LinkedIn) after first share

- Keep NAP consistent if you also claim Google Business Profile
- Avoid inventing review counts or Healthcare certifications not yet earned

Day-7 checklist: & preview card OK & title unique & no Omni chrome in visible copy

Analytics snippet guide (you add the ID)

This package prepares placement guidance — it does not create a live analytics property for you.

Plausible:

Add `<script defer data-domain="YOUR_DOMAIN" src="https://plausible.io/js/script.js"></script>` via a future content refresh, or track outbound clicks to this URL in your existing analytics.

GA4:

Create a property, copy Measurement ID (G-XXXX), and paste into your marketing stack when ready. Until then, treat contact CTA clicks as the conversion event.

Healthcare KPIs to wire once analytics is live:

- Patient intake completion rate
- Appointment show rate / no-show %
- Referral-to-scheduled conversion
- PHI access audit exceptions per month

Checklist: & property created & ID stored in password manager & goal/event named for primary CTA

Retargeting pixel placement guide

Meta/Google remarketing pixels require your ad account ID. Do not invent pixel IDs.

1. Create the pixel / tag in your ads account
2. Place it on the live page only after credentials are live
3. Map the primary CTA as the conversion event
4. Align creative with Healthcare pains: Front-desk overload on intake and rescheduling; Referral leakage between clinics and specialists

Honesty rule: ads channels remain NOT CONNECTED until you wire keys — the site CTA still works without pixels.

Milestone: pixel plan documented even if install is deferred.

Launch QA & acceptance

QA gate for Healthcare Studio (Healthcare) before paid traffic:

- & Mobile viewport: hero + CTA readable without horizontal scroll
- & Contact / checkout path returns success feedback
- & No System Admin / Omni Group chrome in visible title or body
- & Research complete (TAM + competition in research_data)
- & Artifacts generated (module, landing, workflow, outreach, quality pack)
- & Dynamic pricing quote valid for verticalSlug
- & CRM pipeline and lead source defined
- & HIPAA/PHI handling: encryption at rest + access audit trail
- & Business Associate Agreement (BAA) path documented for vendors

Acceptance: owner signs kickoff ticket that the live URL is shareable.

30-day content & CRM follow-through

After launch, keep Healthcare momentum without inventing metrics:

- & PHI-safe CRM field map approved
- & Intake form + reminder path live
- & BAA vendor list attached to go-live pack
- & Review KPIs weekly: Patient intake completion rate; Appointment show rate / no-show %; Referral-to-scheduled conversion
- & Watch risks: Patient intake forms leak PHI into generic CRM fields; Appointment no-show rate without reminder automation
- & Log inbound leads in CRM with source = site CTA

Discovery prompts for the first optimization call:

1. Where is PHI stored today (EHR, forms, email, spreadsheets)?
2. How are referrals handed off from front desk to clinicians?
3. What is the current no-show rate and reminder channel?

Vertical focus: patient intake digitization; clinical scheduling no-show reduction; HIPAA/PHI handling maturity.
Upsell path (only if requested): custom domain, content refresh retainer, audit, or CRM sync when inbound is live.

Next upgrades

- Custom domain DNS (client-owned registrar)
- Content refresh retainer for seasonal offers
- Deeper Healthcare audit if stack/security questions remain
- Integration package when third-party APIs must be wired
