

Omni Group

Quick Setup — Go-Live Checklist

Client — Web3

Prepared for: Client
Deliverable: Quick setup
Date: 07/10/2026

Kickoff scope & owners

Client — Web3 (web3) — quick setup tier.

- Value thesis: End-to-end delivery for Web3: CRM, automations, lead gen, and AI support — no platform resale, only finished output.
- Modules to activate: validator, craftor, crm, compliance, client-hunter
- Domain focus: smart contract audit, wallet connect, gas estimation, multisig
- Owners: client admin (access), Omni fulfillment (config), finance (payment confirm)

Day 1 checklist:

- & Access list collected
- & Brand/legal name confirmed
- & Industry category locked (web3) for vertical pack
- & Success metric agreed (e.g. first paid delivery < 7 days)
- & Testnet dry-run
- & Audit findings closed

Portal & auth

1. Create client portal user; verify login + password reset email
2. Confirm admin vs client role separation
3. Smoke-test session expiry and logout
4. Bookmark dashboard URL for handoff
5. Document recovery contacts if MFA/email delivery fails

Acceptance: client can log in without Omni assistance (Milestone M1).

KPI (Web3): Audit findings closed

Payments & notifications

- Manual bank-transfer reference flow tested end-to-end
- Admin confirm '!' fulfillment notification observed
- Invoice / receipt email path verified
- Contact form delivers to support inbox
- Failed-notify path surfaces in admin ops inbox

Day 2 checklist: & payment notify & invoice & contact form & failure alert & client download path

CRM seed & industry templates

Quick setup seeds labeled DEMO / industry-template CRM rows for Web3 so the team can practice stages without inventing live leads.

- Domain focus: smart contract audit, wallet connect, gas estimation, multisig, mainnet deploy
- DEMO_SAMPLE tags must remain visible until replaced with a real export
- Primary account row kept for the buying contact

- Workflow nuances: Design !' testnet !' audit !' multisig !' mainnet !' monitor

Checklist: & open CRM & identify DEMO rows & advance one sample lead & decide import vs stay-on-samples
Milestone: first Web3 stage practice complete before Day 5 hypercare ends.

Launch & SLA

1. DNS/HTTPS smoke (or hosted path) green
2. Record go-live timestamp
3. Share dashboard + this checklist PDF
4. Agree 5-business-day hypercare window
5. Schedule Day 5 check-in for open issues

Web3 compliance reminders:

- Smart contract audit / review evidence before mainnet
- Multisig ownership and key ceremony documented
- Testnet dry-run signed before mainnet deploy

Industry hooks to mention on handoff: Security-first delivery pack; CRM for crypto consultancies; Compliance documentation

Go-live acceptance: & smoke green & client login & payment path & hypercare calendar invite

Day-5 hypercare & acceptance

Hypercare window for Client (Web3) — close these items before marking setup done:

1. Owner can download this PDF from Deliveries without Omni help
2. Billing invoice / payment history visible to entitled users
3. Notifications bell shows the welcome / fulfillment notice
4. KPI snapshot started: Audit findings closed; Testnet success rate; Mainnet incident count
5. Risk watchlist logged: Unaudited contracts on mainnet; Key custody ambiguity

Day-5 checklist:

- & Open issues listed with owners
- & DEMO CRM cleanup decision recorded
- & Setup milestones: Testnet dry-run; Audit findings closed; Multisig ceremony done
- & Upsell path noted (full onboarding / audit) only if requested

Acceptance: hypercare calendar invite sent; no invented live metrics.

Owner runbook & escalation

Day-to-day runbook for Client operators in Web3:

1. Login !' Notifications !' Billing !' Deliveries (download this PDF + markdown pack)
2. Confirm any bank-transfer payment from Admin only when reference matches
3. Open a support ticket with payment/order ID if fulfillment artifacts are missing
4. Escalate Web3 compliance questions using: Smart contract audit / review evidence before mainnet; Multisig ownership and key ceremony documented
5. Revisit discovery prompts when scope changes: What chains and wallets are in scope?; Who holds multisig keys?

Honesty boundaries (do not oversell):

- Portal entitlements + setup PDF are COMPLETE for this package
- External ads / Apollo / LinkedIn APIs remain NOT CONNECTED unless separately wired

- Custom domain DNS stays with the client registrar
- Integration notes for later packages: Deploy tags correlate contracts, audits, and runbooks; Wallet connect events never log seed phrases

Modules referenced: validator, craftor, crm, compliance, client-hunter

Keywords / positioning: web3, smart contracts, DeFi, NFT

Checklist: & operators named & escalation email known & Deliveries download verified & no invented lead counts
