Landing + copy — Delivery pack

Agriculture Studio — Agriculture

Prepared for: Client
Deliverable: Landing + copy
Date: 07/10/2026

What shipped

landing page for Agriculture Studio in Agriculture (agriculture).

Live URL (path): /sites/agriculture-studio-9efba68db785-muxitbwa

Open in browser: <https://omnigrouptech.com/sites/agriculture-studio-9efba68db785-muxitbwa>

Pages generated: 1

Value thesis: End-to-end delivery for Agriculture: CRM, automations, lead gen, and AI support — no platform resale, only finished output.

Domain tokens in copy scope: crop cycle, field sensor, traceability lot, harvest window, input inventory

Research lenses: Poljoprivreda SMB market; local lead generation; digital adoption pain points; compliance and onboarding

Brand & messaging checklist

Confirm the live page reads as Agriculture Studio — not a platform placeholder.

- & Brand/title shows Agriculture Studio
- & Primary offer language fits Agriculture
- & CTA matches sales path (contact / book / buy)
- & Industry phrases present: crop cycle, field sensor, traceability lot, harvest window
- & Pain points reflected: Paper field logs; Recall fear; Weather-driven chaos

Milestone M1: owner screenshots the hero + CTA for kickoff ticket evidence.

How to share with clients

Send <https://omnigrouptech.com/sites/agriculture-studio-9efba68db785-muxitbwa> as your hosted presence under omnigrouptech.com.

Custom domain DNS is not included — keep this URL or add a redirect / CNAME at your registrar when ready.

Share checklist:

1. Paste the absolute URL into email signature and social bios
2. Add to proposals as “live preview” before custom domain
3. Share with sales so demos use the same CTA as the site
4. Mention Agriculture positioning: Turnkey delivery for Poljoprivreda — no platform resale | CRM + automations tailored to your niche

Acceptance: one outbound message with the live URL sent by the client team.

SEO & social basics

Title/meta and Open Graph tags are set on the published page. Favicon is served from the site shell.

- Primary keywords to monitor: poljoprivreda, SMB, local business, automation, agriculture
- Verify link previews (Slack/WhatsApp/LinkedIn) after first share
- Keep NAP consistent if you also claim Google Business Profile

- Avoid inventing review counts or Agriculture certifications not yet earned

Day-7 checklist: & preview card OK & title unique & no Omni chrome in visible copy

Analytics snippet guide (you add the ID)

This package prepares placement guidance — it does not create a live analytics property for you.

Plausible:

Add `<script defer data-domain="YOUR_DOMAIN" src="https://plausible.io/js/script.js"></script>` via a future content refresh, or track outbound clicks to this URL in your existing analytics.

GA4:

Create a property, copy Measurement ID (G-XXXX), and paste into your marketing stack when ready. Until then, treat contact CTA clicks as the conversion event.

Agriculture KPIs to wire once analytics is live:

- Yield vs plan
- Lot traceability completeness
- Input waste %

Checklist: & property created & ID stored in password manager & goal/event named for primary CTA

Retargeting pixel placement guide

Meta/Google remarketing pixels require your ad account ID. Do not invent pixel IDs.

1. Create the pixel / tag in your ads account
2. Place it on the live page only after credentials are live
3. Map the primary CTA as the conversion event
4. Align creative with Agriculture pains: Paper field logs; Recall fear

Honesty rule: ads channels remain NOT CONNECTED until you wire keys — the site CTA still works without pixels.

Milestone: pixel plan documented even if install is deferred.

Launch QA & acceptance

QA gate for Agriculture Studio (Agriculture) before paid traffic:

- & Mobile viewport: hero + CTA readable without horizontal scroll
- & Contact / checkout path returns success feedback
- & No System Admin / Omni Group chrome in visible title or body
- & Research complete (TAM + competition in research_data)
- & Artifacts generated (module, landing, workflow, outreach, quality pack)
- & Dynamic pricing quote valid for verticalSlug
- & CRM pipeline and lead source defined
- & Lot traceability for food-safety recalls
- & Agrochemical application logs retained

Acceptance: owner signs kickoff ticket that the live URL is shareable.

30-day content & CRM follow-through

After launch, keep Agriculture momentum without inventing metrics:

- & Lot ID scheme live

- & Input inventory baseline
- & Traceability dry-run
- & Review KPIs weekly: Yield vs plan; Lot traceability completeness; Input waste %
- & Watch risks: Missed harvest windows; Input inventory stockouts
- & Log inbound leads in CRM with source = site CTA

Discovery prompts for the first optimization call:

1. How are fields and lots identified?
2. What sensors / logs exist today?
3. Who owns harvest scheduling?

Vertical focus: Poljoprivreda SMB market; local lead generation; digital adoption pain points.

Upsell path (only if requested): custom domain, content refresh retainer, audit, or CRM sync when inbound is live.

Next upgrades

- Custom domain DNS (client-owned registrar)
- Content refresh retainer for seasonal offers
- Deeper Agriculture audit if stack/security questions remain
- Integration package when third-party APIs must be wired
