

Omni Group

Custom Production Deploy

Client — Customer Service

Prepared for: Client
Deliverable: Custom deploy
Date: 06/10/2026

Kickoff scope & owners

Client — Customer Service (customer_service) — custom setup tier.

- Value thesis: End-to-end delivery for Customer Service: CRM, automations, lead gen, and AI support — no platform resale, only finished output.
- Modules to activate: support-avatar, ai-rag, crm, follow-up, notifications
- Domain focus: ticket SLA, CSAT, deflection rate, knowledge base
- Owners: client admin (access), Omni fulfillment (config), finance (payment confirm)

Day 1 checklist:

- & Access list collected
- & Brand/legal name confirmed
- & Industry category locked (customer_service) for vertical pack
- & Success metric agreed (e.g. first paid delivery < 7 days)
- & Ticket SLA clocks live
- & KB seed articles published

Infrastructure

Production deploy prep for Client (Customer Service) — client-executable until Omni-managed infra is contracted:

1. Provision VPS/Docker prod stack with TLS terminator
2. Firewall: only 80/443 (+ SSH allowlist)
3. Automated backups + restore drill documented
4. Monitoring hooks (uptime + error rate) with alert contacts
5. Staging parity checklist signed before prod promote
6. Label env with vertical=customer_service / category=customer_service

Domain focus: ticket SLA, CSAT, deflection rate, knowledge base

Milestone M1: staging parity checklist signed before prod promote.

Checklist: & host sized & TLS path & backup cron & alert contacts & SSH allowlist

Security hardening

- Secrets rotation; no default admin passwords
- Rate limits on auth and public APIs
- Audit log review cadence (weekly for first month)
- Dependency/image patch window defined
- Least-privilege service accounts for deploy + backups
- Customer PII retention for tickets documented
- Escalation tiers and after-hours coverage defined
- Refund / complaint handling policy linked

Operational risks to log for Customer Service:

- SLA breaches without owner alerts

- Knowledge base stale !' repeat tickets
- Escalations lost between tiers

Day 0 go-live security checklist: & secrets & TLS & backups & alerts & least privilege & compliance notes

SLA, ops & handoff

- Uptime target 99.5% measured monthly
- Incident contact matrix + rollback procedure
- Runbook + env template + deploy script access for client ops
- Honesty: domainConfigured / sslProvisioned stay false until client completes DNS/TLS
- Vertical modules: support-avatar, ai-rag, crm, follow-up, notifications
- Domain tokens: ticket SLA, CSAT, deflection rate, knowledge base
- Integration notes: Ticket ID correlates CRM + billing + portal; KB article suggestions from ticket topic tags

Acceptance: production deploy manifest attached; restore drill date recorded; KPI owners named.

Checklist: & runbook executable & PENDING_* statuses honest & rollback owner & restore drill date

90-day optimization checklist

1. Week 2: review error budgets
2. Week 4: automation ROI snapshot
3. Day 60: capacity / cost review
4. Day 90: SLA report + next-quarter backlog
5. Track: Ticket SLA clocks live
6. Track: KB seed articles published
7. Track: Escalation tier map signed

Customer Service KPIs:

- First response SLA
- CSAT
- Deflection rate
- Reopen rate
- & Research complete (TAM + competition in research_data)
- & Artifacts generated (module, landing, workflow, outreach, quality pack)
- & Dynamic pricing quote valid for verticalSlug
- & CRM pipeline and lead source defined
- & Outreach draft reviewed before send (domain warmup)
- & Smoke test / owner sign-off before client delivery

Discovery prompts to revisit: What channels are in scope (email, chat, phone)?; What is the current CSAT and top ticket drivers?; How are refunds approved?

Day 90 acceptance: & SLA report & cost review & backlog prioritized & no invented uptime claims

Client-executable runbook & honesty

This custom deploy pack for Client is COMPLETE as a runbook — not a claim that Omni already configured DNS/SSL.

1. Download production-deploy manifest from Deliveries
2. Complete PENDING_CLIENT DNS/TLS steps at the registrar
3. Confirm backups + restore drill date in writing

4. Apply Customer Service compliance items: Customer PII retention for tickets documented; Escalation tiers and after-hours coverage defined
5. Open a support ticket with payment ID if any artifact is missing

Honesty boundaries:

- sslProvisioned / domainConfigured must remain false until client work is done
- External ads / Apollo / LinkedIn stay NOT CONNECTED unless separately wired
- Do not invent live lead or uptime metrics in handoff emails

Keywords: customer support, help desk, customer success, live chat, customer service

Checklist: & manifest downloaded & PENDING items owned & restore drill dated & escalation path tested
