E-commerce storefront — Delivery pack

Ai & Data Studio — AI & Data

Prepared for: Client
Deliverable: E-commerce storefront
Date: 06/10/2026

What shipped

ecommerce storefront (complete) for Ai & Data Studio in AI & Data (ai_data).

Live URL (path): /sites/ai-data-studio-2026feae791a-mux7xi1y

Open in browser: <https://omnigrouptech.com/sites/ai-data-studio-2026feae791a-mux7xi1y>

Pages generated: 7

Catalog products: 8

Value thesis: End-to-end delivery for AI & Data: CRM, automations, lead gen, and AI support — no platform resale, only finished output.

Domain tokens in copy scope: model evaluation, RAG pipeline, data lineage, prompt governance, hallucination rate

Research lenses: LLM adoption SMB; data pipeline demand; AI automation ROI; RAG use cases

Brand & messaging checklist

Confirm the live page reads as Ai & Data Studio — not a platform placeholder.

- & Brand/title shows Ai & Data Studio
- & Primary offer language fits AI & Data
- & CTA matches sales path (contact / book / buy)
- & Industry phrases present: model evaluation, RAG pipeline, data lineage, prompt governance
- & Pain points reflected: AI demos that fail in production; No eval harness; Data quality blocking automation

Milestone M1: owner screenshots the hero + CTA for kickoff ticket evidence.

How to share with clients

Send <https://omnigrouptech.com/sites/ai-data-studio-2026feae791a-mux7xi1y> as your hosted presence under omnigrouptech.com.

Custom domain DNS is not included — keep this URL or add a redirect / CNAME at your registrar when ready.

Share checklist:

1. Paste the absolute URL into email signature and social bios
2. Add to proposals as “live preview” before custom domain
3. Share with sales so demos use the same CTA as the site
4. Mention AI & Data positioning: AI agent for your niche | RAG over client documentation

Acceptance: one outbound message with the live URL sent by the client team.

SEO & social basics

Title/meta and Open Graph tags are set on the published page. Favicon is served from the site shell.

- Primary keywords to monitor: artificial intelligence, machine learning, data science, LLM, ai & data, ai data
- Verify link previews (Slack/WhatsApp/LinkedIn) after first share
- Keep NAP consistent if you also claim Google Business Profile

- Avoid inventing review counts or AI & Data certifications not yet earned

Day-7 checklist: & preview card OK & title unique & no Omni chrome in visible copy

Analytics snippet guide (you add the ID)

This package prepares placement guidance — it does not create a live analytics property for you.

Plausible:

Add `<script defer data-domain="YOUR_DOMAIN" src="https://plausible.io/js/script.js"></script>` via a future content refresh, or track outbound clicks to this URL in your existing analytics.

GA4:

Create a property, copy Measurement ID (G-XXXX), and paste into your marketing stack when ready. Until then, treat contact CTA clicks as the conversion event.

AI & Data KPIs to wire once analytics is live:

- Eval pass rate
- Hallucination / escalation rate
- RAG retrieval precision@k

Checklist: & property created & ID stored in password manager & goal/event named for primary CTA

Retargeting pixel placement guide

Meta/Google remarketing pixels require your ad account ID. Do not invent pixel IDs.

1. Create the pixel / tag in your ads account
2. Place it on the live page only after credentials are live
3. Map the primary CTA as the conversion event
4. Align creative with AI & Data pains: AI demos that fail in production; No eval harness

Honesty rule: ads channels remain NOT CONNECTED until you wire keys — the site CTA still works without pixels.

Milestone: pixel plan documented even if install is deferred.

Launch QA & acceptance

QA gate for Ai & Data Studio (AI & Data) before paid traffic:

- & Mobile viewport: hero + CTA readable without horizontal scroll
- & Contact / checkout path returns success feedback
- & No System Admin / Omni Group chrome in visible title or body
- & Research complete (TAM + competition in research_data)
- & Artifacts generated (module, landing, workflow, outreach, quality pack)
- & Dynamic pricing quote valid for verticalSlug
- & CRM pipeline and lead source defined
- & Training/eval data provenance recorded
- & PII redaction before model context

Acceptance: owner signs kickoff ticket that the live URL is shareable.

Checkout & shop operations

Buyers get a live shop page, industry catalog with per-SKU stock, cart, configurable tax/shipping, and a working order path.

- Bank transfer always works (payment reference on each order)
- Card checkout uses Stripe TEST when platform keys are configured
- Orders create a CRM contact + in-app notification; stock decrements on success
- Catalog count shipped: 8
- Industry merchandising tokens: model evaluation, RAG pipeline, data lineage, prompt governance

EXTERNAL CONFIGURATION REQUIRED: Stripe LIVE keys and client Stripe Connect / own merchant account are not wired by this package.

Ops checklist: & place test bank-transfer order & confirm CRM contact & verify stock decrement & record tax/shipping defaults

30-day content & CRM follow-through

After launch, keep AI & Data momentum without inventing metrics:

- & Eval suite baseline
- & RAG corpus indexed
- & Human review queue live
- & Review KPIs weekly: Eval pass rate; Hallucination / escalation rate; RAG retrieval precision@k
- & Watch risks: Hallucinations shipped without human review; Stale embeddings after source updates
- & Log inbound leads in CRM with source = site CTA

Discovery prompts for the first optimization call:

1. Which workflows need human-in-the-loop vs auto?
2. What is the source-of-truth corpus?
3. How are model failures detected today?

Vertical focus: LLM adoption SMB; data pipeline demand; AI automation ROI.

Upsell path (only if requested): custom domain, content refresh retainer, audit, or CRM sync when inbound is live.

Next upgrades

- Custom domain DNS (client-owned registrar)
- Content refresh retainer for seasonal offers
- Deeper AI & Data audit if stack/security questions remain
- Integration package when third-party APIs must be wired
